Message-ID: <199509060525.WAA25533@mailhost.primenet.com>

I've been working the Hiram Percy Maxim contest, signing AA7QY/126 and then as qrp in the exchange. There are some good ears out there, or some folk who really want the certificate.

Using the NorCal 40A, I generally work the 40M band from 7020-7050 starting about 0000Z daily, running 1.5 watts. Hope to hear you between now and the 10th.

A note of interest: XR0Y from Easter Island is doing a 30M prop study this week, around 10110-10115....I haven't had a chance to try him, and haven't seen a published time sked, but will keep trying. Heard him on 7024 listening up tonight, but couldn't break the pile.

72, de Roger, AA7QY

Subject: [3076] 160 Meter QRP Rigs?
Message-ID: <"Macintosh */PRMD=MOT/ADMD=MOT/C=US/"@MHS>

Greetings QRPers,

Can anyone recommend a good 160 meter QRP transceiver, CW or SSB, or both? I'd even be interested in separate receivers and transmitters.
Thanks!

Don

Message-ID: <950906115025_12301634@mail06.mail.aol.com>

At a recent hamfest here in Jersey I acquired an HW-7. Unfortunately there were no Schematics, Operating notes or Mods available. Called Heath Co. but they wanted about twice the amount that I had paid for the rig. If anyone out there can help, I would be happy to reimburse dupe and postage costs. Tnx es 73, George, K2BEV.

Message-ID: <950906131146_12356798@mail02.mail.aol.com>

Have an HW-8 in excellent condition. Bought it several months ago and never used it except on receive. I paid \$140 but I will let it go for \$110. Has been modified by original owner. I never really checked it out except on receive. Push buttons were a little dirty. Other than that, it seems to be o.k. Since I did not really check it out, I am selling it for a bit less than I paid.

Message-ID: <950906131135_12356636@mail04.mail.aol.com>

I have a QRP+ for sale. In absolutely mint condition. Never had any operational problems. Includes an HT type electret mic (from Index) and an extension cord for the mic! Have too many rigs.

Price \$550. For information via phone, you can call my office at 513-357-5152.

If you don't want to wait for one from Index, here's your chance.

Regards,

Duffy - WB8NUT

Message-ID: <jennings-9508061300.AA000710973@eng16>

Hi QRPers,

I just bought an Uniden HR2600 10 meter transciever and was wondering if anybody knows
if there are any mods available for it.
I have heard that it can be modified for 17 meters.
Also does anyone have information about "Chip Switch" ?

Thanks in advance and 73,

TJ, kv2x

Subject: [3081] QRP+ W1AW FIX DIAGRAM
Message-ID: <199509061953.PAA02942@dartvax.dartmouth.edu>

Hello Gang,

I finally have that diagram scanned, that's the good news.
The bad news is that the attatched file will be just over a meg. long.
Way too long to post here. So, I will sent it directly to whoever wants it.

I have never done any posting to a FTP. location but I am willing to learn just how to do it. So if any of you would be so kind as to help me out here I'd appreciate it.

The diagram is a hand drawn sketch by Bruce Franklin of Index labs. It shows where to do the mod. I have also written up a set of instructions for those who might want to try it.

Message-ID: <950906093510_12221845@mail06.mail.aol.com>

Chokes are marked like resistors - go to the closest Radio Shack and get their little part #271-1210 and turn the wheels to read values for resistors/caps on one side and inductors on the other. I couldn't build anything without this device. Cost is just a couple of bucks.

Subject: [3068] Ten Tec PM2A Chassis for sale

For all you old Ten Tec scroungers,

I have an old PM2A cabinet without the circuit board for sale to the first person who wants it. It's somewhat scratched up, dial pointer missing, but all front panel stuff is there. No extra holes in the front. Back panel has S0-239 replacing the old phono jack.

It costs \$5.00 to UPS it. Make an offer.

Bradley-

I apologize for coming in the middle of your discussion, but I noticed your reply to someone looking for Ten-Tec accessories in the internet rec.radio.swap postings. I missed the original post, and am replying via Compuserve as my employer will let me read but not write to the net.

I am a new Tech+ ham, and recently purchased a Ten-Tec Argonaut radio to help me work my way up to 13 wpm (I hope). Therefore, I am in the market for Ten-Tec accessories.

I do not know if you have any information on availability of accessories, but I am looking for several-

1. I would really like to find a 206A Pulsed Crystal Calibrator, as my dial string is shot, and when I replace it, I will have to recalibrate the radio.
2. It would be fun to find the 214/234 speech processor and microphone
3. Also the dual paddle keyer, #645
4. I am possibly interested in the 405 50 watt amp, and the Ten-Tec power supply for this amp (251, I think)

If you know anyone who might have these items for sale, I would be interested!

Thank you for your help-

Don Hall KE6JTB CIS 72700,2664 or hall7@llnl.gov

Wow, I guess that I hit a hot button! There are a lot more of you
mobile hf radio op's than I knew!

I truly appreciate all the information on mobile radios,
antennas, tuners and everything that I got! It's really worth a lot.
I was amazed at the number of people that have been doing this for years.
It seems that my 1/2 hour commute each way will soon be full of cw and or
ssb.
Again thanks to all that responded and 73

Subject: [3067] tree supports
Message-ID: <950905202641_11749974@emout04.mail.aol.com>

I use a pulley on one end of my ant -- a 40m dipole fed with ladder line.
The idea is to allow some tree sway to occur without stressing the wire.
Have had it up four years with great results (tho want to add more wire so
it will work on 80). Use a gallon jug filled with sand as a weight. Play
with it to see how much you need. I did tie off the end of the rope too,
allowing some slack, in case the jug came off or was helped off since it is
in the front yard under a 100' cedar. Have a vertical loop for 20 out back
and since it is so lightweight I just hung it without a pulley. I fixed the
two upper corners so the top would be the correct length and let one of the
bottom corners float free on the insulator with the other one as the feed. I
went for the vert polarization for the lower angle and dx hopes. My loop is
quieter than a dipole hung in the same place and does a great job into
Europe. I hung it east/west so it "fires" north/south.

Hi Smitty,

This is simply an event celebrating the 126th anniversary of Hiram Percy Maxim's birthday. Any ARRL official or "badgeholder", i.e. Volunteer Examiner, Life member, staff person, etc., can sign /126 after their call. Contact 25 or more and get a certificate, if you're a paper-chaser.

The event runs from 9/2/95 through 9/10/95. Details are on page 58 of the August '95 QST.

It's a fun thing, and I enjoy hitting the qro guys with a qrp signal, and since they obviously want the certificate, they hang in there for the exchange.

The exchange is RS(T), appointment (VE) SEC) etc., and name. If not a "126" station, just the RS(T) and name. Many are adding their state to the exchange.

Seems to be a lot of activity in the Novice portions, too. Guess I'll have to readjust the 40A a little.

Subject: [3080] Re: KC1 configuration settings
Message-ID: <v02130541ac73a48e0cb1@[199.170.106.28]>

Ted,

Regarding the KC1 manual:

>Do all those offsets and modes have to be reentered every time after the
>unit is turned off?

No. The KC1 uses on-chip EEPROM (non-volatile, reprogrammable memory) for all of its configuration settings and message buffer. You only need to set things once, but if you're bored you can change settings up to 1,000,000 times according to the PIC microprocessor spec sheet. :)

>You live in Houston? Well, bless your soul!

What gave you that idea? I live in Belmont, CA, about 25mi s. of San Francisco. Can't imagine they'd tolerate a leftist, environmental radical like me in Houston....

<snip>

Hello Andrew,

Thanks for your test results. They look similar to mine. The small variance
could be due to individual rig tolerances.

I'll compile a list of birdies for Index to check out. Tell me have you done
the W1AW modification ?

I will post the diagram here today.

The mod made the 7.142 birdie a lot worse,S3.
